Added Value Features

Engineered and manufactured by people in the Industry

Custom carrying case provided

Works with competitors boring bars

Excellent tool for any machine shop

May be used with or without a portable line boring machine

Introducing the first entry level bore welder with an adjustable step feature that allows you to control the weld bead placement. Other machines use a spiral feed which forces the operator to modify the welding parameters to suit the limitations of the bore welder. The York Easy Weld allows you to adjust the bore welder to suit the parameters that best suit the application. The York Easy Weld can be used with any wire feeder that has burnback control. It has a simple remote control that adjusts the torch rotation speed and turns the wire feeder on and off. The Easy Weld can weld in any position and mounts to the same set up plate that supports the boring bar.
